

ApexOne Command Center

Mega Architecture & System Flow

Generated: 2026-07-02 16:17 UTC

1. Executive Summary

ApexOne is a multi-tenant Laravel application: Admin Portal (/admin) and Agent Portal (/portal), scoped per Workspace. Morpheus CX (apexone.morpheus.cx) is the telephony backend. Admins manage leads, email tools, and communications; agents work the pipeline and dial via SIP + Morpheus REST API.

2. Technology Stack

Laravel 13, Blade, Turbo, Vite, Tailwind. Morpheus: REST JSON + API key. Outbound: SIP softphone. AI: Gemini/OpenRouter via queue jobs. Realtime: HTTP polling. No FastAPI, GraphQL, or WebSockets.

3. Portals

Admin (/admin): Super Admin, Admin, Manager - module permissions via workspace_user. Portal (/portal): Setter, Setter TL, Closer, Closer TL - pipeline dashboards. Single User table; role on pivot determines portal access.

4. User Roles

super_admin: full access, workspace owner. admin/manager: granted modules. appointment_setter: own leads + dial. appointment_setter_team_lead: team queue. closers_team_lead: assign closers. closer: close deals.

5. Workspace Tenancy

Workspace = tenant. workspace_user pivot: role, status, module_permissions, morpheus_extension_num. All WorkflowLeads, CRM, call logs scoped by workspace_id.

6. Morpheus Integration

Call-Control API: /api/v1/call-control with X-API-Key. ZoomApiService is the HTTP client. Outbound: SIP (originate API returns 405). Local call history fills CDR gap. Agent flow: Admin provisions extension -> softphone register -> hub dialer -> SIP.

7. Lead Pipeline

Phases: imported -> enriching -> enriched -> with_setter -> appointment_settled -> with_closer -> closed. Admin uploads CSV, AI maps columns, jobs enrich, round-robin to setters. Setters dial and update status. Closer TL assigns closer. Closer closes.

8. Major Modules

Workflows, Pipeline, Sales Ops, CRM, Email Lists, Deliverability, Content Analyzer, Reputation, Business Research, Communications Hub, Lead Tags, Server Monitoring.

9. External Systems

Morpheus CX, Google Gemini, OpenRouter, DuckDuckGo, DNS/MX/SMTP, IMAP, Web Push.

10. Key Files

routes/web.php, routes/morpheus-communications.php, ZoomApiService.php, MorpheusHubController.php, CommunicationsHubController.php, WorkflowService.php, config/integrations.php, config/sales_ops.php, config/admin_modules.php.
